READ BEFORE UNPACKING!!

Unpacking your non-combustible mantel

NOTE: MANTEL MUST BE REMOVED IN ORDER TO ACCESS MOUNTING BRACKET AND INSTRUCTIONS.

Remove foam that is in place around the product and visually inspect mantel prior to removing. If there is any damage to the product, please take photos immediately and provide them to the dealer where you purchased the product. If there is no visible damage, proceed with removing it. Lexington Hearth products are made of a non-combustible proprietary concrete material, so they are quite heavy. Always team lift to avoid any accidental damage to your product.

CORNERS ARE VERY FRAGILE!!

DO NOT stand your product on the end at any time.

Cleaning your non-combustible mantel

Dry dusting is the recommended cleaning method, but vacuuming and air dusting are also viable methods. A moist cloth can be used as long as it has been thoroughly ringed out. **DO NOT SCRUB!!** Scrubbing can damage the finish. **DO NOT USE** any type of abrasive, cleaner, paint remover or any other chemicals to clean your product.

Protecting your non-combustible mantel

We recommend covering your product during stonework, painting, etc. to avoid any damage to the product. When doing any kind of construction or remodeling, we suggest removing the mantel and placing it in a safe location until the majority of the work is done. When finishing around your product, cover the necessary surfaces with cardboard to protect it. **DO NOT** apply painter's tape or any other type of masking tape directly to the product. Doing so could damage the finish when the tape is removed.

Touch Up Paint

In the event that some of the finish is damaged, we include a small container of touch up paint with all of our products to allow you to repair the finish as needed.
